

Namespace vs Room

Namespace vs Room

Default Namespace

Kök namespace '/' dir. İstemci tarafından Sunucuya bağlanıldığında bir ad alanı belirtilmezse, istemciler tarafından katılınan varsayılan namespace'dir.

Custom Namespace

```
const io = require('socket.io').listen(httpServer);  
const nsp = io.of('/my-namespace');  
nsp.on('connection', (socket) => {  
  console.log('user connected');  
});
```

Connect from client to custom namespace

```
const socket = io.connect('http://localhost:3000/my-namespace');
```

Emit to namespace

```
const io = require('socket.io').listen(httpServer);  
const nsp = io.of('/my-namespace');  
nsp.on('connection', (socket) => {  
  console.log('user connected');  
});  
nsp.emit('sayHello', { message: 'hello' });
```

Handle emit

```
const socket = io.connect('http://localhost:3000/my-namespace');
```

```
socket.on('sayHello', (data) => {  
    // do something  
});
```

Joining room

```
io.on('connection', (socket) => {  
  socket.join('room name');  
});
```

Broadcast emit to room

1) Expect sender

```
io.to('room name').emit('some event');
```

2) Including sender

```
io.in('room name').emit('some event');
```

Leaving room

```
socket.leave('room name');
```
